

Year 6
Homework Project
Darwin's Delights!

Your homework task this half term is to find out more about Charles Darwin and his incredible expedition to the Galapagos Islands which led him to develop his theory of evolution. I would like you to create a project that can teach and inform others all about this amazing topic.

You could:

- Find out all about the different species living on the Galapagos - choose your favourite and create a fact file.
- Create a fantastic piece of art work relating to the topic. Perhaps you may choose to produce a detailed sketch or painting of Galapagos wildlife.
- Research Darwin's diaries and sketch books and create a sketchbook of your own with detailed labelled drawings of plants and animals.
- The Galapagos Islands are volcanic, so why not make a 3D model of a volcano.
 - Learn all about tectonic plates and how volcanoes are formed.
 - Find out more about endangered animal species and conservation.
 - Research extinct species - why did they become extinct?
 - Investigate animal adaptation. Could a polar bear survive in the desert? What characteristics make a camel perfect for life on the desert?

These are just a few ideas—the possibilities are endless...

Your projects are always so inventive and creative and it is important to have as much fun as possible with this. Whether you love making, sewing, drawing, painting, writing or computing, choose an idea that works for you and present it in your own unique way.

I look forward to seeing them all! Remember to have fun and involve the whole family!

Projects to be submitted by
Friday 11th March

We will share your projects with the class in a special topic afternoon where you can teach others all about your project.

If you are stuck for ideas or need any help, please contact Mrs Cooper.

Have fun!
